PROFILE

Infrastructure Engineer transitioning into software and AI engineering, with 5+ years building production-grade cloud-native automation across Azure and AWS in enterprise environments. Specialized in Azure infrastructure (IaaS/PaaS), CI/CD pipeline automation, Infrastructure as Code with Terraform, and observability across Splunk, Microsoft Sentinel, Azure Monitor, and Log Analytics. Certified in Azure (AZ-104), Terraform, and RHCSA. Proven track record of reducing operational toil by 35-70% through automation across multi-cloud environments, including automated tech-debt detection across 2,500+ subscriptions, Azure DevOps remediation pipelines resolving 2,000+ flagged resources, and a 35% Azure cost reduction. Recently drove an AI-assisted automation initiative for pipeline-failure detection, log analysis, and release tagging, and build MCP servers and LLM pipelines in the open. EU Blue Card eligible, English C1, German A2 (actively progressing). Seeking software & AI engineering roles in Germany.

TECHNICAL SKILLS

Cloud & Infrastructure: Azure (IaaS/PaaS - VMs, VNets, NSGs, Blob Storage, SQL, Functions, Key Vaults, AKS), AWS (EC2, SSM, S3, IAM, VPC, CloudWatch, ECS), Terraform (IaC, HashiCorp Certified), Docker, Kubernetes, Helm, Azure Networking (Load Balancers, VPN Gateways, Global WAN)
CI/CD & DevOps: Azure DevOps Pipelines, GitHub Actions, Jenkins, YAML-based CI/CD, Ansible, GitOps, GitHub, Azure Repos, Helm, ServiceNow
Observability & Monitoring: Splunk Enterprise (multi-site clustering, SOC2, dashboarding), Microsoft Sentinel, Azure Monitor, Log Analytics, Grafana, Prometheus, alerting, root cause analysis, on-call operations
Scripting & Automation: Python (Boto3, Azure SDK), PowerShell, Bash/Shell, runbook development, patch automation, tech-debt scanning and remediation, cost optimization
Operating Systems: RHEL Linux (RHCSA certified), UNIX, Windows Server, SCCM/MECM, Workspace One, Tanium
Security & Compliance: CyberArk, Azure Key Vaults, HashiCorp Vault, SOC2 compliance, Azure Entra ID (SSO), zero-trust security, SaaS security controls
AI & Tooling: Model Context Protocol (MCP) servers, AI-assisted Splunk tooling, LLM structured-output pipelines, multi-agent orchestration (Paperclip, Honcho, GitNexus, Hermes), Pandas, NumPy, scikit-learn, TensorFlow/Keras

PROFESSIONAL EXPERIENCE

Wolters Kluwer

April 2024 - Present

DevOps & Cloud Engineer (IT Infrastructure & Operations)

Pune, India

- Architected and led the migration of Splunk to a multi-site clustered deployment, achieving WK ARC certification - improving search performance, high availability, and disaster recovery readiness.
- Built multi-cloud automation (AWS SSM/EC2 + Azure Run Command) for Splunk Enterprise upgrades with automatic rollback, managing 20,000+ endpoints with 99.9% success rate; automated index provisioning via Azure DevOps Pipelines from ServiceNow, cutting index creation turnaround from 3-5 days to 10-15 minutes.
- Led migration of 200-300 subscriptions across 25 non-primary Azure tenants into the WK CTC (Security) Team structure, deploying standard governance policies at management-group level via Terraform and keeping ServiceNow CAM records in sync - a 2.5-3 month program.
- Built Python/PowerShell scan automation for tech-debt detection across 2,500+ Azure and AWS subscriptions, owning Azure DevOps remediation pipelines that resolve 2,000+ flagged resources on demand; resolved 400+ P1/P2 incidents with root-cause analysis and SLA adherence.
- Designed and implemented disaster recovery plans with defined RPO/RTO targets, and built end-to-end observability for infrastructure patching cycles using Splunk dashboards and Grafana.
- Implemented automation workflows in Python, PowerShell, and Bash that reduced BAU operational workload by 35%, freeing engineering capacity for strategic initiatives; achieved 35% Azure cost reduction through resource right-sizing and cleanup automation.
- Drove an AI-assisted automation initiative for pipeline-failure detection, log analysis, and release tagging - the foundation the MCP servers and AI-assisted Splunk tooling build on.
- Provisioned Azure landing zones for dev/test and staging with governance, RBAC, and network segmentation; managed P1/P2 critical incidents to maintain 99.9%+ service availability; mentored 3+ team members on DevOps practices.

Wolters Kluwer

August 2022 - March 2024

Associate DevOps & Cloud Engineer (IT Infrastructure & Operations)

Pune, India

- Developed Splunk dashboards for real-time financial reporting and SOC2 compliance monitoring, enabling audit-ready visibility for leadership and security teams.
- Engineered data protection controls including ingestion suppression of sensitive fields and secure network architecture, ensuring compliance with enterprise security standards and SOC2 requirements.
- Provisioned and managed Azure cloud environments (VMs, VNets, Blob Storage, Key Vaults) with clustered Splunk deployment, enabling safe testing of configuration changes before production rollout.
- Integrated SSO via Azure Entra ID and implemented secrets management tooling (Azure Key Vaults, CyberArk) to streamline access management across the team.
- Developed self-service automation runbooks reducing manual operational efforts by 70% and team dependency on specialized ops.
- Recognized with Star Performer Award (Q1 2023) for outstanding contributions to infrastructure automation and operations.

Colgate Global Business Services

August 2021 - July 2022

Executive Associate (Endpoint & Infrastructure)

Mumbai, India

- Managed 20,000+ global Windows endpoints using Microsoft SCCM/MECM, Workspace One, and Tanium across 79 factories in 70 countries.
- Led global Windows patch management operations spanning 79 factories across 70 countries, ensuring consistent compliance and vulnerability remediation across distributed environments.
- Built automations for silent application deployments using SCCM/MECM/Tanium, including Microsoft 365 administration, software distribution, and endpoint compliance management.
- Developed PowerShell automation to identify and decommission legacy applications, collaborating with licensing teams to meet business deadlines.
- Partnered with the Security team to rapidly deploy emergency patches for zero-day vulnerabilities, ensuring minimal exposure and fast risk mitigation.

CERTIFICATIONS

HashiCorp Certified: Terraform Associate (003)	HashiCorp
AZ-104: Microsoft Azure Administrator Associate	Microsoft
Red Hat Certified System Administrator (RHCSA)	Red Hat
AZ-400: Designing and Implementing Microsoft DevOps Solutions (In Progress)	Microsoft
AZ-900: Microsoft Azure Fundamentals	Microsoft
AI-900: Microsoft Azure AI Fundamentals	Microsoft

EDUCATION

Master of Technology, Computer Engineering KJ Somaiya College of Engineering

November 2020 - September 2022

Mumbai, India

Bachelor of Engineering, Computer Engineering Mumbai University

June 2016 - October 2020

Mumbai, India

INTERESTS

Engineering: Linux & open source, AI & automation

Wellness & Discipline: Sports & fitness, Swimming

Culture & Creativity: Learning German, Playing guitar

LANGUAGES

English (C1, fluent), Hindi (native speaker), German (A2, basic)
